

# Svay Chrum Primary School

## Facts

Name	Ao Svay
Type of facility	Primary School
No. of students	233 (123 girls, 110 boys)
No. of teachers	5 (1 female, 4 males)
No. of classrooms	5 classrooms
Size of building	1 x 360 m2
Budget	US\$ 57,588
Construction period	April – October 2012
Project manager	Yem Khlok
Location (Province)	Oddar Meanchey, Cambodia

## Description

Till today, Cambodians continue to suffer from the aftermath of having withstood more than 20 years of political and civil unrest during and after the Khmer Rouge regime. In spite of its bustling tourism and high influx of non-government and community-based organisations, development is not evenly spread in Cambodia. Svay Chrum Primary School is located in the Trapeang Prasat district of Oddar Meanchey province. The community of Ao Svay village had established the school with their own resources in 1998. This school plays a fundamental role in Ao Svay village, as it offers the children with an opportunity to access primary education. With more than 330 households living in this community, a total of 233 students (123 girls and 110 boys) are currently enrolled with Svay Chrum Primary School. Due to the limited classroom space available, the school is held over two sessions (four classes in the morning and two in the afternoon) to accommodate all the children. As the school has been in session since it was established, the condition of its buildings is neither stable nor safe for the students and teachers. Built primarily from wood, thatched roofs and some sheets of zinc, the buildings do not provide enough shelter to shield the students from the harsh weather condition.

## Map

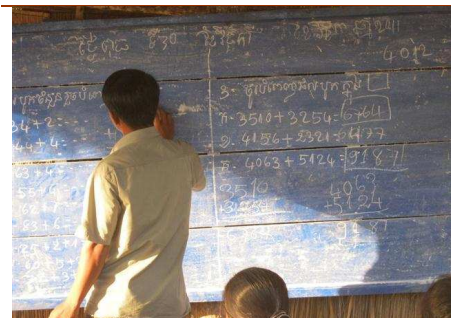

## Implementation

We plan to build one new school building with five classrooms for Svay Chrum Primary School. In addition, furniture will be provided for the rooms, and a flag pole and entry gate will be built. UNICEF had built the toilets recently and they are still in functioning order. The school committee and villagers will contribute to the project by leveling the land, filling up the foundation and building a fence around the school yard (to keep the cattle outside of the school compound). The Cambodian Ministry of Education will continue to support the school with teachers. Construction materials will be sourced and transported from the district town (approx. 30km from the project site). A professional contractor will be hired to manage the actual construction and will be paid in four installments after each construction phase is completed. 5% of the labour cost will be kept as warranty for the construction work and will only be paid 6 months after project completion. The construction is scheduled to start in April 2012 and is expected to be completed by October 2012. We consider this a low risk project. However, the unpredictability of the weather condition and rainfall may delay the transportation of construction materials.
