

Trapeang Prasat Primary School - Renovation

Facts

Name	Trapeang Prasart Primary School
Type of facility	School Buildings
Number of students	1,037 (512 girls, 525 boys)
Number of teachers	27 (8 females, 19 males)
Number of classrooms to be renovated	2 school buildings, 10 classrooms
Total number of classrooms in school	5 school buildings, 21 classrooms
Size of buildings	Each building 360m ²
Budget	USD 18,104
Construction period	March 2014 – April 2014
Project manager	Ms. Sreylin Chum
Location (Province)	Trapeang Prasat Commune, Oddar Meanchey Province, Cambodia

Description

Trapeang Prasart Primary school is located in Oddar Meanchey Province in Cambodia, bounded in the North by Thailand. The school was established in 1998 by the Cambodian Ministry of Education with the help of several private organisations to accommodate the growing population of students in the area. The school is composed of five buildings with a total of 21 classrooms, 11 toilets and made out of mixed materials but mainly wood. Up to date, Trapeang Prasart is the biggest primary school in the entire district with a total of 1,037 students from kindergarten to grade six. The students' age range from five to twelve years old mostly coming from the neighbouring villages of Sras Chrey, Trapeang Prasat and Toul Tasek. Out of five school buildings, building A and B are the oldest ones and in very poor condition, damaged by time and exposure to harsh elements. Both buildings were constructed in 1999 and left deteriorating due to a lack of funding. During the rainy season, the children abandon their classrooms due to big holes in the roof that developed from corrosion. The dirt floor usually turns into a muddy patch when it's raining and becomes dusty in the dry season. The community relies on farming, plantation, and construction work and their income simply cannot generate enough money to support the major renovation cost of the damaged school buildings. Child's Dream supports the renovation of building A and B composing of ten classrooms by replacing doors, windows, and the roofs. The dirt floor will also be replaced with concrete to create a more conducive learning environment for the young students of Trapeang Prasart Primary School.

Map

Implementation

The contractor will be responsible for purchasing the needed construction materials in the nearby town of Trapeang Prasart. This project is considered a low risk project because the school is situated not too far from town and the road is accessible even during rainy season. Our staff in Cambodia will monitor the development of the construction regularly to make sure it is executed according to our high standards. The community will raise money to contribute towards the painting of the school buildings, helping to entice the interest of the children to go to school. Previously, they also raised money to build the fence around the school to avoid farm animals from entering the school grounds. The community has displayed their commitment to education through past fundraising efforts and is highly motivated to improve the school facility. They have assured us they will encourage the students to attend the newly renovated school and help maintain school premises. The construction will take place from March to April 2014.
