

Anloun Lvea Primary School

Facts

Name	Anloun Lvea
Type of facility	Primary School
No. of students	145 (63 boys, 82 girls)
No. of teachers	6 (3 male, 3 female)
No. of classrooms	1 school building with 4 classrooms & 1 toilet
Size of building	288 m ²
Budget	USD 49,045
Construction period	May - December 2015
Project manager	Mr. Sinoeuy My
Location (Province)	Anloun Lvea Village, Sangkae District, Battambang Province, Cambodia

Description

In spite of its flourishing tourism, Cambodia is still one of the poorest and least developed countries in Southeast Asia. Development is not evenly distributed in the country and many rural communities remain poverty-stricken as corruption and self-interest impedes the country's growth. Anloun Lvea Primary School is located in Sangkae District of Battambang Province. The local community has a population of 1,432, where the main source of income originates from subsistence farming. The school offers education from Primary 1 to Primary 6, and has 145 students, aged 6 – 12, in attendance. The current school building was constructed in 1995 and is now under great risk of collapsing. Due to the potential of the building falling apart on students, classes were relocated to a local villager's basement. With insufficient space and little protection from the rain and dust, students cannot fully benefit from their education in such a restrictive environment. By providing a new school building with four fully furnished classrooms, we will be addressing the lack of proper school infrastructure, enabling children to learn and grow in real and safe classrooms. Furthermore, a new school building will emphasize the importance of education to the community and provide an incentive for the children and youth to continue with and complete primary education.

Map

Implementation

We will support Anloun Lvea Primary School by constructing one new building with four fully furnished classrooms and one toilet. The government is responsible for the teachers' salaries and the provision of learning materials. As with all our projects, we will seek to involve the local community in the construction process as much as possible. The community will contribute by filling up the school foundation, monitoring the construction progress and reporting to us regularly. We will perform regular check-ups in order to evaluate our high quality standards. Involvement of the community in the project is critical as it encourages a stronger sense of ownership over the project. A local contractor will be hired to manage the labour and materials, and oversee the construction of the school. Once the project is completed, the community will be responsible for the maintenance of the school building. Payments will be made in instalments according to the progress of the construction and 5% of the total cost will be held back for six months as a guarantee for the work.

We consider this project as low risk. The main risks would be delays in construction due to a very strong rainy season and potential absenteeism by workers in order to mend their fields during plantation. Construction is due to begin at the end of May and completion is expected by December 2015.

Photos

Classes take place at a local villager's basement

With little protection against the elements and with cramped desks, productivity is quite low

Budget

Item	USD	in %
Construction material	33,225	68%
Labour	6,799	14%
Interior & furniture	2,927	6%
Transportation	1,749	3%
Monitoring & implementation costs	912	2%
Administration overhead contribution	3,433	7%
Total budget	49,045	100%

Due to old age, the school building will likely collapse and therefore not in use anymore
